Crear Componentes para la Pantalla DBZ

Código

main-page.component.html

lista.component.html

lista.component.ts

```
import { Component } from '@angular/core';

@Component({
   selector: 'dbz-lista',
   templateUrl: './lista.component.html',
   styleUrl: './lista.component.css'
})
```

add-personaje.component.html

add-personaje.component.ts

```
import { Component } from '@angular/core';

@Component({
   selector: 'dbz-add-personaje',
   templateUrl: './add-personaje.component.html',
   styleUrl: './add-personaje.component.css'
})
export class AddPersonajeComponent { }
```

dbz.module.ts

```
import { NgModule } from '@angular/core';
import { CommonModule } from '@angular/common';
import { MainPageComponent } from './pages/main-page.component';
import { ListaComponent } from './components/lista/lista.component';
import { AddPersonajeComponent } from './components/add-personaje/add-
personaje.component';
```

```
a NgModule({
    declarations: [MainPageComponent, ListaComponent, AddPersonajeComponent],
    exports: [MainPageComponent],
    imports: [CommonModule]
})
export class DbzModule { }
```

app.component.html

```
<app-dbz-main-page></app-dbz-main-page>
```

app.component.ts

```
import { Component } from '@angular/core';
import { DbzModule } from './dbz/dbz.module';

@Component({
    selector: 'app-root',
    standalone: true,
    imports: [DbzModule],
    templateUrl: './app.component.html',
    styleUrls: ['./app.component.css']
})
export class AppComponent {}
```
